COCRACTOR: BINDS TWO CALCIUM IONS.

SUBUNIT: MONOMER.

MISCELLANEOUS: GGTASE MAY CONSIST OF TWO PROTEIN DOMAINS: THE ONE
MISCELLANEOUS: GGTASE MAY CONSIST OF TWO PROTEIN DOMAINS: THE ONE
IN THE AMINO-TERMINAL SIDE CLEAVES THE ALPHA-1,4-GLUCOSIDIC BOND
IN STARCH, AND THE OTHER IN THE C-TERMINAL SIDE CATALYZES OTHER
ACTIVITIES, INCLUDING THE RECONSTITUTION OF AN
ALPHA-1,4-GLUCOSIDIC LINKAGE FOR CYCLIZING THE
MALTOOLIGOSACCHARIDE PRODUCED.
SIMILARITY: BELONGS TO FAMILY 13 OF GLYCOSYL HYDROLASES, ALSO
KNOWN AS THE ALPHA-AMYLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A 2439
A plan-amylase (EC 3.2.1.1) precursor - Bacillus stearothermophilus (strain NZ-3)
A plan-amylase (EC 3.2.1.1) precursor - Bacillus stearothermophilus
C Species: Bacillus Stearothermophilus
A Steepence number: A 91817; WIU: 86195857
A Fittle: Structural genes encoding the thermophilus alpha-amylases of Bacillus stearo
A Freedence number: A 91817; WIU: 86195857
A Reference number: A 91817; WIU: 86195857
A Reference number: Back of Strain NZ-3
A Reference number: Back of Strain NZ-3
A Reference number: I Sono; C Species of Strain NZ-3
A Reference number: I Sono; O Strain NZ-3
A Residues: Series preliminary: translated from GB/EWBL/DBJ

A; Residues: EMBL: X60779; NID:g39411; PIDN: CAA43194.1; PID:g39412
C; Genetics:
A; Gene: amyE
C; Function:
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Pathway: g1ycogen/starch degradation
C; Superfamily: alpha-amylase, amyloliquefaciens type; alpha-amylase core homology
                                                                                                                                                                                                                                                                        polys

C; Comment: Alpha-amylase genes have been found on plasmids and 1
C; Genetics:
A; Genome: plasmid
A; Start codon: GTG
C; Function:
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-A; Pathway: glycogen/starch degradation
C; Superfamily: alpha-amylase, amyloliquefaciens type; alpha-amyl C; Superfamily: alpha-amylase, amyloliquefaciens type; alpha-amyl c; Keywords: extracellular protein; glycosidase; heat-stable prot F; 1-34/Domain: signal sequence #status predicted <SIG>F; S5-548/Product: alpha-amylase fstatus experimental <NAT>F; 235-368/Domain: alpha-amylase core homology <AMY>F; 139, 237, 272, Binding site: calcium (ABP, ASP, His) #status predicted
F; 268, 298, 365/Active site: ASP, Glu, ASP #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 1196;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A) Description: catalyzes both the hydrolysis of internal 1,4-alp vely from the non-reducing end (beta-amylase activity)
A) Pathway: glycogen/starch degradation
C; Superfamily: alpha-amylase core homology
C; Keywords: glycosidase; hydrolase; polysaccharide degradation
F; 1-35/Domain: signal sequence #status predicted <SIG>F; 36-1196/Peroduct: beta-amylase/alpha-amylase #status predicted
F; 908-1033/Domain: alpha-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  11.6%; Score 315; DB 2;

Alpha-amylase is an enzyme that acts on starch-related polysaccharides, hydrolysing the alpha-1,4-glucoside bond of the polysaccharide molecule. Alkaline liquefying alpha-amylases exhibit resistance to surfactants used in detergents, and decompose starch or starch-related polysaccharides in a highly random manner. The Bacillus species KSM-AR1378, from which this sequence was isolated, is an alkalophilic Bacillus strain. It was isolated from soil in the vicinity of the city of Tochigi. The enzyme is useful in improving the efficiency of dish-washing and laundry detergents, particularly on starch dirts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sequence represents the coding sequence for an alkaline liquefying

                                                                       The present invention relates to a mutant alpha-amylase. Included in the invention are a gene encoding the mutant alpha-amylase, a vector containing the gene, and a transformed cell recombined by the vector. The enzyme is used in a detergent composition. The present sequence represents the mutant alpha-amylase gene.
                          in a detergent composition

This DNA sequence may be expressed recombinantly for the production of an alpha-amylase protein. The produced protein is characterized by having a specific activity at least 25% higher than the specific activity of Termanyl at 25-55 deg C and a pH of 8-10. The enzyme activity of Termanyl at 25-55 deg C and a pub of 8-10. The enzyme production of lignocellulosic materials, e.g. pulp, paper and cardboard from waste containing starch, for deinking recycled starch-coated, or starch containing printed paper, to modify starch for papermaking, for textile desizing, and beer-making
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New alkaline Bacillus alpha-amylase - used in e.g. detergent compsns. starch liquefaction, textile desizing, starch modification

```
have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequences of the parent termamy1-like alpha-amylase: T141, K142, F143, D144, F145, P46, G147, R148, G149, O174, R181, G182, D183, G184, K185, A186, W189, S193, W195, H107, K108, G109, D166, W167, D168, Q169, S170, R171, Q172, F173, F267, W268, K269, N270, D271, L272, G273, A274, L275, K311, E346, K385, G456, W457, K458, P459, G460, T461, W462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, and/or for textile desizing, and in starch liquefaction and/or saccharification processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the variants of the invention.
                    specification describes termamy1-like alpha-amylase variants that

The specification describes termamyl-like alpha-amylase variants that have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termamyl-like alpha-amylase: T141, K142, F143, D144, F145, F146, G147, R148, G149, Q174, R181, G182, D183, G184, K185, A186, W189, S193, N195, H107, K108, G109, D166, W167, D168, Q169, S170, R171, Q172, F173, P267, W268, K269, W270, D271, L272, G273, A274, L275, K311, B346, K385, G456, W457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, saccharification processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the
                                                                                                                                                                                                                                                                                                                                                                                                                                         Termamyl-like; alpha-amylase; variant; washing; dishwashing; production; sweetener; ethanol; starch; textile desizing; starch liquefaction; saccharification process; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17

```

This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamy1-like alpha-amylase with a batha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W09526397, B. stearothermophilus, B. licheniformis, B. amyloliquefactiens or Bacillus spe #707. The Alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol). textile ${\tt lnLeuGlnGlyAlaValThrSerLeuLysAsnAsnGlyIleGlnValTyr} \ 100$ yGlupheAsnGlnLysGlyThrValArgThrLysTyrGlyThrArgSerG AGAGTTTAACCAGAAGGGGACGGTTCGTACAAAATATGGAACACGCAACC GlyAspValValMetAsnHisLysGlyGlyAlaAspGlyThrGluMetVa lasnalaValGluValAsnArgSerAsnArgAsnGluGluIleSerGlyG 1 HisHisAsnGlyThrAsnGlyThrMetMetGlnTyrPheGluTrpHisLe Sequence 1455 BP; 461 A; 248 C; 361 G; 385 T; 0 other; for Length: 485 Gaps: 0 Percent Identity: 95.052 or as detergents Disclosure; Page 83-84; 93pp; English from: 1 nseful desizing or starch liquefaction Ouality: 2613.00 Ratio: 5.421 Percent Similarity: 99.381 Align seg 1/1 to: AAX57597 alignment_block: US-09-590-375-2 x AAX57597 Variant alpha-amylases alignment_scores

The sequence was isolated from a Bacilius genomic DNA library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by raindom mutagenesis. As a result of their increased stability, the variants are suitable for the industrial processing of starch, i.e. starch liquefaction and saccharification. They may also be useful for washing, dishwashing and textile desizing. Hybrid alpha-amylases comprising partial amino acid sequences derived from two or more alpha-amylases have also been created in order to increase enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Variant of parent termamyl-like alpha amylase useful for washing, textile desizing and starch liquefaction, comprising alterations in or more solvent exposed amino acid residues
                                                                                                                                                                                                                                                                                                                                                                                Bacillus parent Termamyl-like alpha-amylase DNA sequence

```
The present sequence encodes an alpha-amylase from which mutants with increased stability at acidic pH, low calcium concentration and high temperatures have been derived. The sequence was isolated from a Bacilius genomic DNA library. A variant may contain mutations in one or more solvent exposed amino acid residues to increase the overall hydrophobicity of the enzyme or the overall number of methyl groups in the side chains of exposed residues may be increased. The mutations can be incorporated by site-directed mutagenesis or by random mutagenesis. As a result of their increased stability, the variants are suitable for the industrial processing of starch, i.e. starch liquefaction and textile desizing. Hybrid alpha-amylases comprising partial and ocid sequences derived from two or more alpha-amylases have also been created
                                                                                                                                                                                                                                                                                                          Variant of parent termamyl-like alpha amylase useful for washing, textile desizing and starch liquefaction, comprising alterations in one or more solvent exposed amino acid residues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              200

```

This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamy1-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in WO9526397, B. stearothermophilus, B. licheniformis, a mayloliquefaciens or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing starch liquefaction (e.g. for production of sweeteners or ethanol).                                                                                                                                                                                                                                                                                                                                                                                                          184
                                                                                                                                                                                                                                                                                                                                                                                                                     The specification describes termamyl-like alpha-amylase variants that have altered amino acid sequences to improve properties. The variants are produced by creating one or more of the following mutations in amino acid sequence of the parent termamyl-like alpha-amylase: T141, K142, F143, A186, F145, P146, G147, R148, G149, Q174, R181, G182, D183, Q184, K185, A186, W189, S193, N195, H107, K108, G109, D166, W167, D168, Q169, S170, R171, E346, K385, G456, N457, K458, P459, G460, T461, V462, A274, L275, K311, E346, K385, G456, N457, K458, P459, G460, T461, V462, G450, The variants can be used for washing and/or dishwashing. They can also be used in the production of sweeteners and ethanol from starch, and/or for textile desizing, and in starch liquefaction and/or saccharification processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the variants of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               other

The variants have altered amino acid sequences to improve properties. The variants amino acid sequence of the parent termanyl-like alpha-amylase: T141, K142, F143, D144, F145, P46, G147, R148, G149, Q174, R181, G182, D183, G184, K185, A186, W189, S193, M195, H107, K108, G109, D166, W167, D168, A274, L275, K311, E346, K35, G456, W457, K458, P459, G460, T461, V462, T463. The variants can be used for washing and/or dishwashing. They can also be used in the production of sweetners and ethanol from starch, and/or for textile desizing, and in starch liquefaction and/or saccharification processes. The present sequence encodes an amylase that can function as the parent sequence in the production of the

This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamyl-like alpha-amylase with a variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in WO9526397, B. stearothermophilus, B. licheniformis, B. amyloliquefaciens or Bacillus sp. #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing or starch liquefaction (e.g. for production of sweeteners or ethanol).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            84 InLeuGlnGlyAlaValThrSerLeuLysAsnAsnGlyIleGlnValTyr 100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    401
                                                                                                                                                                                                                                                                                                                                                       301
```

```
This sequence represents the coding sequence for a parent sequence used to generate new variants of a Termamy1-like alpha-amylase with alpha-amylase activity. The variants comprise mutations in 2-6 regions/positions relative to an alpha-amylase from either of two Bacillus species in W0526597, B. stearothermophilus, B. licheniformis, B. amyloliquefaciens or Bacillus spe #707. The alpha-amylase variants are detergent additives for use in detergents for dishwashing, manual or automatic laundry. The variants can also be used for textile desizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sweeteners or ethanol).
